Date: May 9, 1988

The most recent Health Department report on our well came out unsatisfactory and we have to chlorinate the well again. Curt will be doing that on Tuesday morning, May 10. He will be shutting the well pump off around 9:00 in the morning and leaving it off until around 5:00 in the evening. Those of us without storage tanks will be without water during that period of time so please prepare yourselves. After the water comes back on, any water that has a strong chlorine smell should be run to waste. Do not drink the water until all smell of chlorine has gone away.
